(Instructor Consent)

INDIANA UNIVERSITY INFORMED CONSENT STATEMENT FOR RESEARCH #10250

Teaching Qualitative Research Methods at the Graduate Level with Shared Data

ABOUT THIS RESEARCH

You are being asked to participate in a research study. This consent form gives you information about the study to help you decide whether you want to participate. Please read this form, and ask any questions you have, before agreeing to be in the study.

TAKING PART IN THIS STUDY IS VOLUNTARY

You may choose not to take part in the study or may choose to leave the study at any time. Deciding not to participate, or deciding to leave the study later, will not result in any penalty or loss of benefits to which you are entitled and will not affect your relationship with the principal investigators or Indiana University Bloomington.

WHY IS THIS STUDY BEING DONE?

The purpose of this study is to analyze the practice of using shared qualitative data when teaching qualitative research methods at the graduate level in the social sciences. This study seeks to examine the practices of two instructors of graduate-level qualitative methods at two different institutions.

You were selected as a possible participant because you are a methods instructor who teaches qualitative research courses at the graduate level.

The study is being conducted by Dr. Jessica Nina Lester, an Associate Professor in Inquiry Methodology and Darcy Furlong, Doctoral Student in Inquiry Methodology in the Department of Counseling & Educational Psychology in the School of Education at Indiana University, Bloomington. Drs. Sebastian Karcher (Syracuse University) and Diane Kapiszewski (Georgetown University) are also co-principal investigators in this study.

HOW MANY PEOPLE WILL TAKE PART?

If you agree to participate, you will be one of approximately 2 instructors taking part in this study. Students (N=30) enrolled in each instructor's course will also be invited to participate in the study.

WHAT WILL HAPPEN DURING THE STUDY?

If you agree to be in the study, you will engage in the following activities.

- Participate in an initial, 60-minute interview wherein you describe your qualitative methods course, identify the lesson(s) wherein you teach data analysis, and describe the way that you approach teaching thematic analysis or another analytic method.
- Record (via zoom or another recording device) your lesson(s) with graduate students on data analysis.

- After the lesson(s) on data analysis, you will participate in an in-depth, 60-minute interview concerning the benefits and challenges of using existing data to teach qualitative research approaches.
- All the interactions will take place via Zoom and be recorded.
- If you agree, de-identified interview and lesson transcripts will be made available to other researchers after the conclusion of the project through the Qualitative Data Repository at Syracuse University, a dedicated repository for securely sharing qualitative research data.

WHAT ARE THE RISKS OF TAKING PART IN THE STUDY?

While participating in the study, the risks, side effects, and/or discomforts may include potential loss of confidentiality during the data collection process or when the findings are reported. Efforts will be made to keep your personal information confidential by storing the audio/video recordings in a secure location, and de-identifying the dataset in all publications and/or presentations related to the study.

WHAT ARE THE POTENTIAL BENEFITS OF TAKING PART IN THE STUDY?

We don't expect you to receive any direct benefit from taking part in this study, but we hope to learn things that will help qualitative methods instructors in the future.

HOW WILL MY INFORMATION BE PROTECTED?

Efforts will be made to keep your personal information confidential. We cannot guarantee absolute confidentiality. Your personal information may be disclosed if required by law. No information which could identify you will be shared in publications about this study.

To ensure the best confidentiality, the following procedures will be taken. All data will be stored in an IU password-protected box. You will receive a pseudonym once the data is transcribed and your identifiable information will not appear in any form of publication or presentation.

WILL MY INFORMATION BE USED FOR RESEARCH IN THE FUTURE?

Information for this study may be used for future research studies or shared with other researchers for future research. If this happens, information that could identify you will be removed before any information is shared. Since identifying information will be removed, we will not ask for your additional consent.

WILL I BE PAID FOR PARTICIPATION?

You will receive a 100 USD gift card after you complete the research activities.

WILL IT COST ME ANYTHING TO PARTICIPATE?

There is no cost to you for taking part in this study.

WHO SHOULD I CALL WITH QUESTIONS OR PROBLEMS?

For questions about the study, contact the researcher, Jessica Nina Lester at jnlester@indiana.edu or 701-471-5078.

For questions about your rights as a research participant, to discuss problems, complaints, or concerns about a research study, or to obtain information or to offer input, please contact the IU Human Subjects Office at 800-696-2949 or at irb@iu.edu.

CAN I WITHDRAW FROM THE STUDY?

If you decide to participate in this study, you can change your mind and decide to leave the study at any time in the future. The study team will help you withdraw from the study safely. If you decide to withdraw, please contact Dr. Jessica Lester immediately. We will delete all the data that have been collected from you. We will also do our best to address your concerns afterward.

PARTICIPANT'S CONSENT

Participant's Name: _____

Date: _____

☐ Verbal consent given to participate in the two interviews and the recording of the analysis lesson.

☐ Verbal consent given for de-identified interview and lesson transcripts to be made available to other researchers after the conclusion of the study through the Qualitative Data Repository at Syracuse University, a dedicated repository for securely sharing qualitative research data.
